Obtaining a test report on paper <span style="float: right;">yes / no</span>	

Tested product name (s) /	Batch No. /date of manufacture	Quantity of specimens tested	Packaging	Type of test/characteristic

Method of obtaining specimens/ samples for testing in the laboratory: courier / on site

More information: .....

The tests are within the accredited flexible scope: yes / no

- The test methods are in accordance with the ACLT Accreditation Order
- The reported expanded uncertainty of the chemical tests is based on a standard uncertainty multiplied by a coverage factor  $k = 2$ , providing a confidence level of approximately 95%.
- This expanded uncertainty in microbiological testing is based on a standard technical uncertainty calculated according to ISO 19036, multiplied by a coverage factor  $k = 2$ , providing a confidence level of approximately 95%. This does not include matrix or distributive uncertainty
- The test specimen is provided by the applicant and the latter is responsible for its representative value.
- The remainder of the test specimen shall be stored for 48 hours after the issue of the test report.
- The application has the force of a legally binding agreement between the ACLT and the client.
- The ACLT undertakes to notify the assignor in advance if it is necessary to disclose information obtained or created during the test, which constitutes professional secret, except in cases where this is not prohibited by law.
